that turns your field data into insights
FieldView™ enables you to collect, store and analyze data on one easy-to-use platform. This powerful digital tool is backed by dedicated customer support, data-driven recommendations and cutting-edge science. Get the insights you need to make more informed decisions and maximize return.
We are the leader in bringing digital innovation to farmers, with a mission to help all the world’s farmers sustainably increase their productivity through the use of digital tools. Behind every farmer’s FieldView account is our unique blend of agronomic science, data science, software engineering and real-world farming experience.

get your data in one place
Get all your data in one place with compatibility across many equipment types, makes and models, and connectivity to multiple farm management software systems. FieldView helps you easily collect, store and view field data for more of the inputs you manage through the season.

uncover valuable field insights
Uncover valuable insights year-round with tools that help you analyze crop performance at the field level or by field zone, essentially making every field a potential test plot.

optimize your inputs
Optimize inputs to maximize yield and profitability on every acre with variable rate seeding, fertility and crop protection prescription tools.
collect data seamlessly
easy **field data collection** and sharing

Collect and store data for every pass on your field with your equipment of choice using the FieldView™ Drive, or Precision Planting 20/20 SeedSense® and YieldSense® monitors. You can also upload data seamlessly from flash drives or other systems. You have the option to share your operation’s data with your agronomic partners, making it easy for them to provide informed insights and recommendations.
The FieldView Drive is simple to install and compatible with 80% of equipment types.*

If you decide to share your data with your agronomic partners, you have the option to share your entire operation, one farm or single fields.

FieldView is the most connected platform in the industry, with connectivity between our platform and many agronomic software partners. Data sharing is easy, and farmers are always in control of how their data is shared with partners.

*For questions about machine compatibility, visit climate.com/compatibility or contact Climate Support at 1-888-924-7475.
Monitor your progress and spot potential issues in real time as you pass through the field, tracking seed population rate at planting, application rates during growing season, and yield at harvest, so you can get the most out of every crop.

“It’s simple for me to remote in to see what’s going on and solve an issue with a phone call instead of driving to the field.”
—Tim Brand, MO
Remote viewing allows you to see maps build even when you’re not in the cab. Available on your iPhone® and iPad® devices.

Instantly track seed population and other key data.

Track yield in real time during harvest.

PRICING AND SUPPORT
The FieldView platform is the central hub of digital farming innovation, providing you the choice to access to a broad and interconnected set of tools from more than 70 platform partners—from aerial imagery, to insurance, soil analysis and more.

“Our aerial imagery partner allows us to seamlessly integrate their images into FieldView so we can compare additional map layers for better insights.”

—Logan Beyke, KY
You’re in the driver’s seat, you can connect your data through our partnerships across many industry categories.
build prescriptions in minutes
maximize yield with variable rate seed prescriptions

With all your data in one place, it’s easy to build prescriptions on your own or with your dealer. FieldView seed scripts are powered by unique research and scientific models, along with your field data, to optimize your investment. You can also use our simple manual seed prescription tools to save time and improve productivity.

"Using the FieldView seed scripts tool has allowed us to use maybe not less seed, but place that seed where it can be more profitable."

—Justin Hanson, IA
Tailor your prescription to your unique yield and profitability goals.

FieldView seed scripts are customized for you by zone, population rate and yield, and available for nearly any seed brand.

View and edit your customized zones to get the most yield per acre.

Farmers using FieldView seed scripts saw an average increase of +5 bu/ac compared to users who wrote their own scripts.*

*Assumptions: Comparing 281,000 ac in 4,179 fields. More than 25% of field had script. Products’ maturity ranges between 95-115. Limiting comparisons to the same county; represents 79 counties in 10 Midwestern states. Minimum of 3 Advanced & DIY seed scripts in a county to be compared.
easily manage your fertility prescriptions year round

Build a customized fertility plan on your own or with your dealer to get the most out of your field variability with easy-to-use manual fertility prescription tools for nitrogen, phosphorus, potassium and lime. These additional map layers are right at your fingertips for easy analysis.

Strategies to Defend Your Yield from Threats
scout fields from anywhere
use imagery to **see your fields** like never before

Find out what’s happening beyond the end rows with consistent, high-quality imagery that can help you identify issues early, prioritize scouting and take action to protect yield. Save valuable time with electronic and print options to share with agronomic partners.

“Field health imagery definitely changes the way I scout. I can set a higher priority to what areas of the field I need to spend my time on.”
—Jon Schram, NE

scout fields from anywhere — 26
Use vegetation maps to monitor green plant material throughout the growing season.

Use scouting maps to identify and save field regions for deeper analysis.

Cloud-cover imagery provides a true-color, real-world view of your fields when clouds are present.
analyze yield data instantly
analyze yield data instantly
Analyze yield by seed type, soil, field or custom zone immediately after harvest, so you can see what worked and what didn’t. Easily share with your agronomic partners to start planning for the next season. Compare critical data layers such as soil maps, application rate and seed population to yield to make more informed decisions.

“We use the yield analysis tool on every field for making decisions on population, seed selection and seed placement, and we’ve seen a big effect on our bottom line.”

—Scott Friestad, IL
Analyze yield performance by field, seed, and soil type.

See how your agronomic decisions impacted yield by comparing critical data layers like the ones above showing how seed population affected yield on different parts of a field.
